SUMMARY

- Backend Developer with 2.5 years of experience building scalable, event-driven systems using Python (FastAPI), Typescript, Node.js, Redis, and RabbitMQ. Strong in system design, asynchronous processing, and high-performance API development in fintech environments.

EDUCATION

A.D Patel Institute of Technology

Bachelor of Engineering (CS)

June 2020 – June 2024

Anand, Gujarat

WORK EXPERIENCE

Webmob Technologies

Dec 2023 – Present

Software Developer

Ahmedabad

- Collaborated with stakeholders across 2 major fintech initiatives, translating business requirements into scalable backend architecture and database designs and implemented RESTful APIs and WebSocket services using Python and FastAPI to support real-time communication, lending workflows, and device interaction systems in production environments.
- Built event-driven backend workflows processing 5K–20K async jobs/day using RabbitMQ and implemented Redis caching strategies reducing critical API latency by 30–50% and lowering database read load by 40%.
- Designed and optimized PostgreSQL schemas spanning 25+ domain entities supporting multi-actor lending, co-lending orchestration, and high-volume transactional financial workflows schemas with proper normalization, foreign key constraints, and indexing to support transactional workflows and improve query efficiency.
- Integrated Stripe and Wise payment infrastructure processing hundreds of transactions/day and developed AWS S3 storage pipelines managing 10K+ financial and KYC artifacts with secure access controls.

PROJECTS

Loan Marketplace Platform

Python, PostgreSQL, Redis, RabbitMQ, AWS S3, WebSockets

- Built backend services supporting 1K+ monthly loan applications, enabling collateral lifecycle management and real-time messaging.
- Designed RabbitMQ pipelines processing 3K–10K async events/day and implemented Redis caching reducing latency by 40%.

Real Estate Multi-Bank Co-Lending Platform

Python, PostgreSQL, Redis, RabbitMQ, Stripe, Wise, AWS, WebSockets

- Architected backend infrastructure supporting multi-bank co-lending across 5+ financial institutions via event-driven workflows.
- Optimized distributed system performance by implementing a multi-level caching strategy with Redis, reducing P99 response latency for eligibility computations by 45% and significantly offloading PostgreSQL read pressure.

A/V Device Communication Platform

Node.js, Electron.js, WebSockets

- Developed persistent WebSocket communication layer for 50–100 connected A/V devices with sub-second command latency.

TECHNICAL SKILLS

Languages: Python, JavaScript (ES6+), TypeScript, SQL (PostgreSQL, MySQL), GraphQL

Backend/API: FastAPI, Node.js, Express, RESTful APIs, WebSocket Architecture, Microservices

Messaging: RabbitMQ, Redis (Caching/Pub-Sub), Event-Driven Design, Background Workers

Databases: PostgreSQL, MongoDB, MySQL, Redis, Query Optimization, Schema Design, Indexing

Cloud/Infra: AWS (S3, EC2, Lambda), Docker, CI/CD, Git, Linux, System Design Fundamentals

Fintech: Stripe, Wise, Idempotency, Reconciliation, KYC Workflows, RBAC

Frontend: React.js, Chrome Extensions, Electron.js

Tools: Git, GitHub, API Debugging, Structured Logging, System Design Fundamentals
